

Risk Disclaimer

SimpleWealthFX explicitly excludes any liability for risks arising from investment transactions or asset dispositions made by customers based on received information or market analysis. The information provided here is purely illustrative and does not constitute investment advice or specific recommendations for action. It is highly recommended that customers consult their personal financial advisor before engaging in any specific transactions or investments.

Given the high risks involved, individuals should only undertake such transactions if they have a clear understanding of the contracts and relationships they are entering into and if they can fully assess their risk potential. Trading with futures, options, forex, CFDs, stocks, cryptocurrencies, and similar financial instruments may not be suitable for many individuals. It is crucial to carefully consider whether trading aligns with one's experience, objectives, financial situation, and other relevant circumstances.

Past performance does not guarantee future results. It is important to be aware of the following specific risks associated with trading financial instruments:

Risks associated with electronic trading: Before conducting transactions through an electronic system, individuals should thoroughly review the rules and provisions of the relevant stock exchange or financial instruments, as well as the conditions set by their broker. Online trading carries inherent risks due to system response times and access variations influenced by market conditions, system performance, and other factors beyond one's control. It is essential to understand these additional risks before engaging in investment transactions.

Risks associated with the stock market: Any opinions, news, investigations, analyses, prices, or information provided by SimpleWealthFX are general remarks and comments and should not be considered as investment advice. SimpleWealthFX assumes no liability for any loss or damage, including lost profits, resulting directly or indirectly from the use or reliance on such information. Investors should be aware that all investment forms described here involve substantial financial risk, and past performance does not guarantee future results. Individual investors bear full responsibility for their investment decisions and should assess their financial situation, investment objectives, risk tolerance, and liquidity needs, consulting their personal financial advisor when in doubt.

Risks associated with futures trading: Futures transactions are highly risky due to the low initial margin compared to the value of the futures contract, resulting in leverage or gearing. Small market movements can have a significant impact on deposited funds, either positively or negatively. There is a possibility of losing the initial margin and any additional funds deposited. If the market moves against one's position or margin requirements increase, substantial additional funds may be required to maintain the position. This may lead to a negative balance in the broker account, requiring payments beyond the initial investment.

Risks associated with forex trading: Trading in foreign exchange ("Forex") on margin carries high risk and is not suitable for all investors. Past performance is not indicative of future results. The leverage involved can work both for and against traders. Before investing in foreign exchange, individuals should carefully evaluate their investment objectives, experience, financial resources, and risk tolerance. There is a possibility of partial or total loss of the initial investment. All risks associated with foreign exchange trading should be considered, and consulting an independent financial advisor is recommended.

Risks associated with options trading: Options trading involves substantial risk and may lead to the complete loss of the investment within a short period. The potential loss and resulting payment obligation may exceed the funds invested through the securities account. Prior to investing in the options market, individuals should consider their investment objectives, experience, financial resources, and risk tolerance. Significant losses that surpass the initial investment can occur.

Risks associated with staking: Staking in cryptocurrencies involves risks. Market volatility, regulatory uncertainties, and technological vulnerabilities can lead to financial loss. Staked assets may be subject to theft or hacking. Perform thorough research, consider your risk tolerance, and seek professional advice before engaging in cryptocurrency staking.

Risks associated with mining: Cryptocurrency mining involves significant risks and uncertainties. Prices of cryptocurrencies are highly volatile and can fluctuate dramatically, resulting in potential financial losses. Mining hardware and equipment may become obsolete or inefficient, leading to reduced profitability or complete loss of investment. Regulatory changes, technological vulnerabilities, and network disruptions could impact mining operations. Operational costs, including electricity and maintenance expenses, can vary and affect profitability. Past performance is not indicative of future results. It is important to carefully consider these risks and conduct thorough research before engaging in cryptocurrency mining.

Given the above, there is no guarantee or promise of success or profitability in investments made. By using this website, individuals acknowledge that SimpleWealthFX cannot be held liable for any damages resulting from their investments. It is important to refer to SimpleWealthFX 's General Terms and Conditions.

None of the information provided by SimpleWealthFX constitutes an invitation to trade financial instruments or securities of any kind. Trading stocks, currencies, CFDs, Forex, spread betting, futures, and cryptocurrencies carries a significant risk of loss and may not be suitable for all investors. Past performance does not guarantee future results. It is advisable to assess one's financial situation and seek professional advice to determine if trading is appropriate and if one can bear the high risk of loss. Contingent orders, such as "stop loss" or "stop limit" orders, may not necessarily limit losses to the intended amounts due to market conditions.

The "leverage" effect of trading can work both in favour of and against traders, resulting in substantial losses or high profits. The tutorials and examples presented are based on simulated and hypothetical transactions and do not reflect real trades. Results may be over- or undercompensated based on market factors, such as liquidity.

The information provided here is for entertainment purposes only and does not constitute investment advice. It cannot replace professional advice, and SimpleWealthFX cannot be held responsible for any losses or damages. Trading carries a certain addictive potential, and professional help should be sought if at risk.

The testimonials on this website reflect individual users' experiences and do not indicate future situations or represent typical cases. They do not exempt individuals from the obligation to consult a qualified financial advisor before making investments.
